

Corafone Task

Scenario

A consumer is 180+ days delinquent on a **\$1,000 debt** and has ignored previous contact. Your agent calls them. Close the highest-value agreement they'll actually honor.

Acceptable outcomes, in order of preference:

1. Full payment
2. Highest-amount downpayment + one more payment
3. Settlement (up to 20% off), max 3 payments
4. Payment plan (no discount), over 3 months max, with biweekly, weekly, or monthly payments

The smallest payment can never be less than 25%.

Requirements

- Any AI voice platform or framework.
- The consumer's proposed amount must be validated and countered by logic **outside the agent**, mid-call.
- Define and enforce your own compliance guardrails. Persuasion that relies on threats, false urgency, or invented consequences fails regardless of how well it converts.
- Log the final agreement wherever you like, we won't evaluate the destination system.

What you deliver

1. **A working agent we can talk to ourselves.** A phone number or web link, live and reachable for at least 7 days after submission. We will call it multiple times and we will not be a cooperative consumer.
2. **The code and prompts.** A repo with everything: prompts, tool definitions, external validation logic, and a README.
3. **A short recording (max 5 minutes).** Demonstrating the agent and we'll test the agent ourselves. Use the time to explain your three most important decisions and what you tested. Keep notes; we'll ask follow-ups.

What happens next

If your agent holds up, we'll book a 30-minute video call where we talk to your agent together, and dig into your decisions.

Delivery

- **Deadline:** 2 days
- Send the agent link/number, repo access, and recording (Claap / Loom) to aman@corafone.com, adrian@corafone.com & ana@corafone.com

Questions

- Just send an email

Good luck! :)
